

# Minimization of Spore Germination on AEGIS Coated surface

Picture illustrates Spore germination on treated and non-treated surface continuously analyzed for 18 hours. Conidial germination on AEGIS coated surface was found to be most actively inhibited. However, > 80% of conidia germinated on uncoated surface after 16 hours of incubation.

Effective against  
known pathogenic  
microbes, non-toxic  
eco-friendly

**AEGIS** is the clear solution to  
microbial control.

Protected by the  
**aegis**  
MICROBE
